

Red Team as a Service

Crowdsourced red teaming that simulates real attacks for stronger, real-world defense

Bugcrowd's Red Team as a Service (RTaaS) is the first-ever offering to bring the scale, agility, and rewards-driven impact of crowdsourcing to red teaming—by connecting customers to a global, elastic network of vetted operators for multiple types of engagements fully managed on the Bugcrowd Platform.

This radically new approach to red teaming combines traditional, blended, and continuous models, ensuring persistent, real-world attack simulations that can evolve to address emerging threats.

Unlike rigid, one-off engagements, RTaaS flows findings into existing DevSec processes. This will help you proactively identify and address vulnerabilities across people, processes, and technology—turning findings into action before adversaries exploit them.

Legacy Red Teams vs. Bugcrowd RTaaS

Traditional Red Teams

Rigid, time-boxed engagements

Limited operator availability

Delayed reporting, minimal collaboration

Large, hard-to-digest final reports

Hard to scale for new or shifting assets

Bugcrowd RTaaS

A radical new approach to proactive security

Breaches are costing companies an average of \$4.84M* requiring organizations to need more than typical security efforts to stay ahead of persistent, advanced threats. Bugcrowd's RTaaS offers:

Real-world adversarial tactics

Bugcrowd RTaaS goes beyond traditional red team exercises by offering ongoing, adaptive testing. It uncovers evolving attack chains—just like real cybercriminals, hackers, and nation-state actors.

Scalable and flexible

Easily scale your engagement up or down by using Bugcrowd's global pool of vetted operators and multiple tier options (Assured, Blended, or Continuous) of red team operations to ensure fresh tactics and up-to-date skills.

Unified platform for every maturity stage

RTaaS works seamlessly with Bugcrowd's Pen Testing as a Service, Managed Bug Bounty, and Vulnerability Disclosure Programs, enabling organizations to address every stage of security maturity under a single platform—all while growing alongside evolving security needs.

Bugcrowd RTaaS Subscription

✓ Flexible scheduling and continuous programs

✓ Global bench of vetted specialists across 350+ skills

✓ Real-time visibility and updates via the platform

✓ Actionable insights integrated into DevSec workflows

✓ On-demand elasticity to adapt to emerging threats

Bugcrowd RTaaS

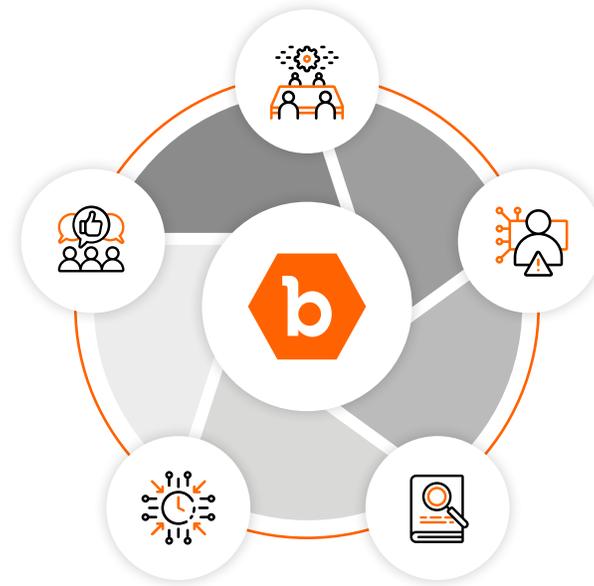

How it works

Customizable engagement planning and launch

Work with Bugcrowd experts to set clear objectives and constraints, integrate threat intelligence, address compliance needs, and set organizational priorities.

Real-time visibility and attack approval

Get real-time visibility and notifications to approve and refine attack paths on the fly using an interactive dashboard within the Bugcrowd Platform.

Adversarial simulation

Skilled operators execute attack strategies aligned with real-world threats. The Bugcrowd team coordinates each step, ensuring methodology and goals are met.

Ongoing support and improvement

Access Bugcrowd's global intelligence and best practices, continuously updated based on thousands of customer engagements, to evolve your testing scope as your environment or threats change. This will ensure security improvements persist over time.

Comprehensive reporting and remediation

Detailed reports include adversarial tactics, attack chains, root-cause analysis, and actionable remediation guidance. These allow you to see long-term effects and meet compliance requirements.

Flexible engagement models for real-world impact

Bugcrowd offers three red teaming models designed for various maturity levels, compliance needs, or budget.

Assured Red Teaming

Fully managed, dedicated team

A dedicated team of expert operators is deployed for a set period, working closely with the client to meet specific security objectives. This traditional red team approach ensures deep collaboration, reliability, and an assessment of the organization's security posture. Each team is CrowdMatched to fit the unique needs of your organization.

Blended Red Teaming

Crowdsourced Ops Team + Assured team

A hybrid model that combines traditional red teaming with scalable, on-demand testing. Clients benefit from the collaborative efforts of highly skilled operators with initial phases conducted by a trusted group of vetted crowd operators. An Assured Red Team then takes over, ensuring a dynamic and adaptable security assessment.

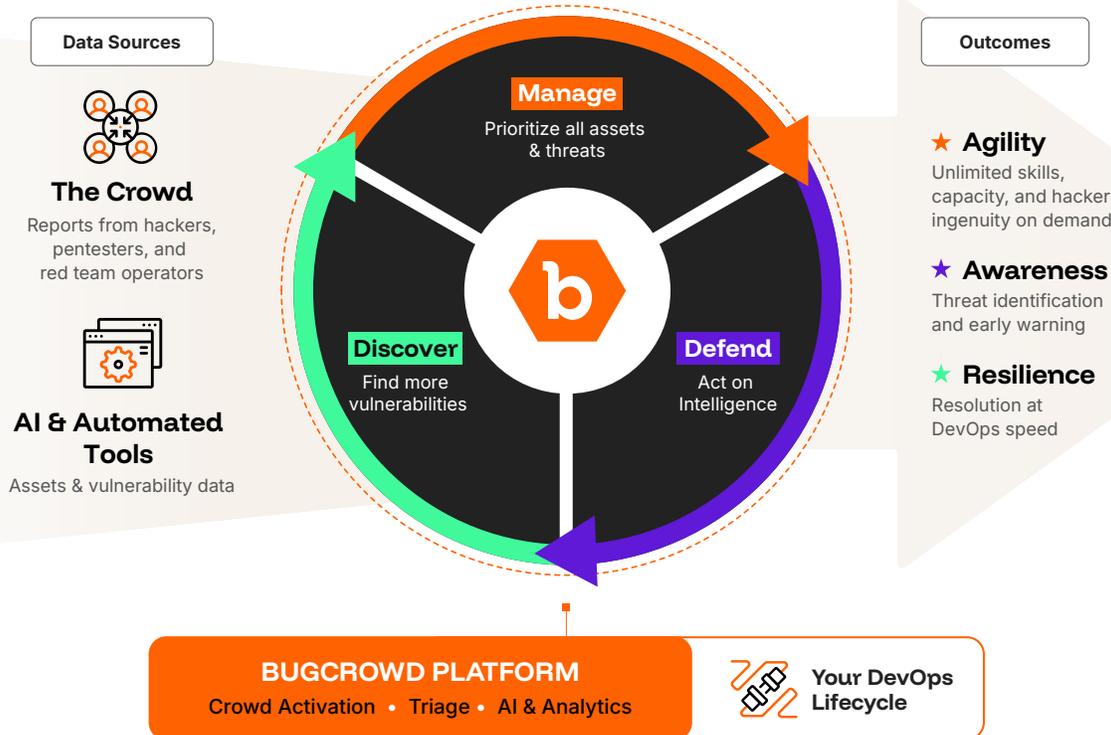

Continuous Red Teaming

Ongoing, open-scope testing

Ongoing security testing that adapts to evolving threats. Trusted teams of vetted experts rotate through ongoing assessments. These operations replicate real-world attacks helping organizations strengthen their defenses against the most realistic threats.

Bugcrowd Platform

The Bugcrowd Platform fuses AI with real-time, crowdsourced intelligence from the world's top ethical hackers, pentesters, and red teamers (aka The Crowd), as well as from automated tools that generate asset, threat, and vulnerability data. The powerful combination of human creativity and automation empowers you to continuously:

Agility

Augment Your Team On Demand

- ✓ Attacker mindset on tap for vulnerability discovery, pen testing, and red teaming
- ✓ 350+ skill sets and certifications available
- ✓ Crowd curation and activation guided by data and AI

Awareness

See and Prioritize Emerging Threats

- ✓ Continuous vulnerability intake, validation, and triage at scale
- ✓ 24/7 triage coverage with same-day response for P1s
- ✓ Early warning of emerging vulnerabilities

Resilience

Continuously Improve Security Posture

- ✓ Actionable reporting, benchmarking, and recommendations
- ✓ Directly integrates with existing tools for change at DevOps speed
- ✓ Deep bench of solution & support specialists at your side for quick wins and long-term ROI

Unleash Human Creativity for Proactive Security
